

Main features of the unique technology of Gaposa electronic encoded motors:

- Easy limit adjustment via the setting tool with no need to access the motor head
- High accuracy of limits positions. The encoded magnet enclosed in the motor crown guarantees a perfect tracking of rotations of the shade.
- The capability of connecting in parallel several Gaposa motors without any additional switching units (relays).
Motors can be bridged and controlled as a group by a single wall switch (with adequate amperage.)
- Automatic safety power cut-off during upward rotation (if the shade gets stuck while raising.)
